In June 2020 we asked...

What do we believe our data story will say about how services have responded during COVID 19?

You said...

We experienced a drop in referrals and activity when Alert Level 4 hit, but then referrals started to flow in again and our activity picked up as the lockdown continued.

COUNT OF UNIQUE TĀNGATA WHAI ORA AND TOTAL ACTIVITY HOURS PER DAY - JANUARY 2019 TO OCTOBER 2020

Count of unique clients and total activity hours per day

INSIGHT

Compared with April/May 2019, we see a drop in Activity hours in April/May 2020 despite the count of unique tāngata whai ora remaining relatively stable.

PERCENTAGE (%) CHANGE IN COUNT TĀNGATA WHAI ORA – VS THIS MONTH LAST YEAR

% change in total number of unique clients, vs this month last year

INSIGHT

Did you spot the contradiction?
It appears to be a similar number of tāngata whai ora per day, but fewer tāngata whai ora per month, equaling a higher frequency of activity for a smaller number of tāngata whai ora.

We responded to a crisis and adapted our service delivery methods to ensure people had access to the supports they needed.

2019 - THE YEAR BEFORE COVID-19 WAS RELATIVELY CONSISTENT....

Activity hours by date and activity setting - 2020

Activity setting ● AV ● CM, DM ● CT, ES, MC, PC, PO, PR, YJ ● DP, OS ● OM, SM, WR ● PH

INSIGHT

Our use of audio visual and phone to make contact with tāngata whai ora through lockdown levels noticeably increases, but diminishes again in Level One.

We've learnt that technology can both facilitate as well as limit our service engagement. While virtual technology works for some people, choice matters when it comes to engaging with services in a way that improves individual health outcomes.

Question:

Did the data give us the insights we anticipated?
